

NDMA Flood Response Protocol 2019

FLOOD RESPONSE PROTOCOL 2019

1.1 Pre-Flood Preparedness

- Keep emergency supplies ready: water, food, medications, flashlight, batteries
- Know your evacuation routes and nearest shelter locations
- Keep important documents in waterproof containers
- Install flood warnings and stay alert to weather updates
- Maintain a family emergency communication plan

1.2 During Flood Warning

- Move to higher ground immediately when warned
- Do not wait for instructions to evacuate if water is rising
- Avoid walking through flowing water - 6 inches can knock you down
- Do not drive through flooded roads - 2 feet of water can sweep away vehicles
- Stay away from bridges over fast-moving water

1.3 During Flood

- If trapped in a building, go to the highest floor, not the attic
- Signal for help if needed: whistle, flashlight, bright cloth
- Do not touch electrical equipment if wet or standing in water
- Avoid contact with floodwater - it may be contaminated
- Do not return to flooded areas until authorities declare safe

2.1 Drowning Response

- Call emergency services immediately
- Begin CPR if person is not breathing
- Do not attempt rescue in swift water without proper equipment
- Use reaching or throwing aids from safe locations

2.2 Waterborne Disease Prevention

- Use only bottled or boiled water for drinking
- Wash hands frequently with soap and clean water
- Report any symptoms of diarrhea, vomiting, or fever
- Dispose of dead animals and waste properly

3.1 Flash Flood Areas

- Chamoli, Rudraprayag, and Uttarkashi districts are high-risk zones
- River valleys and steep terrain increase flash flood risk
- Monsoon season (June-September) requires extra vigilance
- Stay alert for sudden water level rises in rivers

3.2 Evacuation Procedures

- Follow designated evacuation routes marked by SDRF
- Assembly points are at community centers and schools
- Register at shelters for tracking and assistance
- Carry identification and emergency contact information
